

Supplemental Material: Magnetization reversal of an individual exchange-biased permalloy nanotube

A. Buchter, R. Wölbing, M. Wyss, O. F. Kieler, T. Weimann, J. Kohlmann, A. B. Zorin, D. Rüffer, F. Mattheini, G. Tütüncüoglu, F. Heimbach, A. Kleibert, A. Fontcuberta i Morral, D. Grundler, R. Kleiner, D. Koelle, M. Poggio

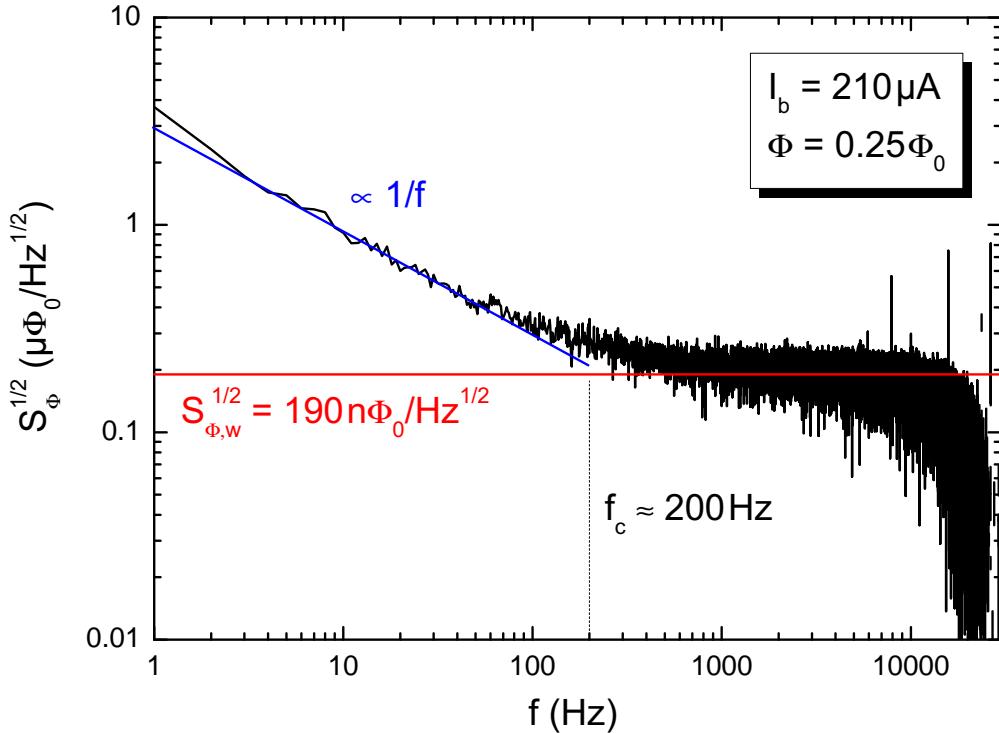

FIG. 1. Spectral density of rms flux noise, measured for Nb nanoSQUID at $T = 4.2\text{ K}$ in magnetically and electrically shielded environment at optimum bias current I_b and applied flux Φ . The horizontal line indicates the level of white noise $S_{\Phi,w}^{1/2}$. The line approximating the data at lower frequency indicates the $1/f$ noise. The vertical dashed line indicates the corner frequency f_c .
